SWISS SLEEP

re
think
your
sleep.

riposa Circle Sleep® back support mattresses – produced in Switzerland, [recycled in Switzerland](#).

RIPOSA CIRCLE SLEEP®
BACK SUPPORT MATTRESSES.
PRODUCED IN SWITZERLAND,
RECYCLED IN SWITZERLAND.

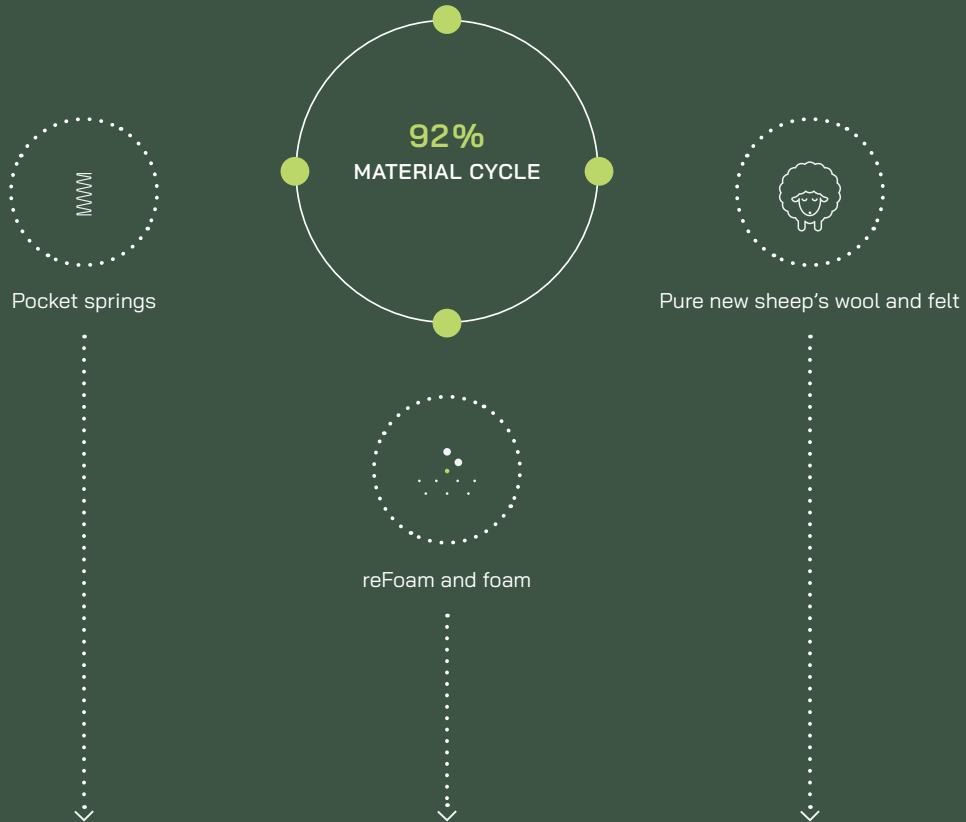

For us, sustainability means thinking everything we do through to the end. This means forging long-term relationships with suppliers and partners, while keeping our channels to them as short as possible. It means a careful and sensible choice of materials. It means a safe working environment for our employees and local production of the products that are as durable as possible. **For us, sustainability also means rethinking things.** After all, what our environment and society need right now is more appropriate materials, more mindful production methods and contemporary processes.

With Circle Sleep, we are breathing life into a new **generation of products**. At the same time, with a completely new **method of mattress production**, we combine ergonomic Swiss sleeping comfort with a mattress construction that is optimised for recycling, down to the very finest detail. We thus return 92% of the core of Circle Sleep mattresses to a closed-loop cycle at the end of their service life, thus acting in line with the closed-loop economy. Produced in Switzerland, recycled in Switzerland.

**92% OF THE MATTRESS CORE
GOES BACK INTO THE SWISS
INDUSTRIAL CYCLE THROUGH
CIRCLE SLEEP®**

Circle Sleep is our newest product line.
But Circle Sleep is so much more than that:
Circle Sleep reflects the way we think and
act.

As such, Circle Sleep also stands for a completely new type of material engineering and a new type of mattress manufacturing process, which we have rethought and redesigned in close cooperation with long-standing industry partners – from creation to disposal. What that means: We already have the entire life cycle of the mattress in mind when we manufacture it. Together with our network of selected specialists, we manage to recycle 92% of the mattress core in Switzerland and feed the resulting primary and secondary raw materials back into Swiss industry.

Go back into Swiss industry: steel is a primary raw material.

Recycled as a secondary raw material and used again in industry as composite foam.

Processed into insulation material as a secondary raw material.

**CIRCLE SLEEP® BACK SUPPORT
MATTRESSES FOR ERGONOMIC,
SUSTAINABLE LYING.**

When we talk about ergonomic Swiss sleep comfort, we're looking back on two decades of expertise in ergonomic lying and holistic sleep health – in short, about Swiss Sleep Technology, which goes into the development of each and every one of our products.

The two Circle Sleep mattress models "reVive" and "reActive" each embody proven Swiss Sleep Technology in their own unique way. What do the models have in common? With their Circle Sleep design, they put them emphasis on the efficient use of resources and materials in an unprecedented, sustainable way.

reVive

Gentle adjustment for sensual sleep.

In the "reVive" mattress model, the ergonomic pocket spring core (7 zones) is surrounded by the innovative "reFoam" material. The surface consists of carefully hand-inserted Swiss pure new wool clouds, which are embedded in additional padding material made of Swiss comfort foam.

Ideal for all those who prefer a sensual, gently nestled sleeping sensation and can sleep with peace of mind, knowing that 92% of the core of their mattress will be returned to a sustainable cycle.

Surface comfort with pure new wool clouds

For a particularly soft feel when lying and an optimal bed climate.

reFoam

This sustainable foam composition is manufactured in a newly developed process, in close cooperation with Swiss material specialists.

Mattress cover

The high-quality mattress cover is carefully handcrafted at riposa and combines lying comfort, hygiene and sustainability. The materials used – Swisswool and Polycot thread (with recycled cotton content) – ensure an optimal bed climate.

Sleeping system

Back support mattresses and slatted bases are coordinated at riposa – and for good reason: only when perfectly combined do you get the full effect. At riposa, everything goes with everything else, so the latest generation of back support mattresses can also be combined with all riposa slatted bases.

Pocket spring core

The pocket spring core provides sensual adaptation and support for the body in optimally coordinated interaction with the mattress surface.

TECHNICAL DETAILS

Mattress height 18 cm

Mattress core height 16 cm

Cover sheet

The cover sheet, quilted with high-quality Swisswool and climate fibre, is removable, washable, repairable and replaceable.

Mattress fabric composition

80% polyester / 20% Polycot
(with 40% recycled cotton content)

Care | Symmetry

The mattress is symmetrical lengthwise and can be rotated clockwise. The underside of the mattress is not suitable for lying on.

Anti-allergy design

Also available with an anti-allergic cover sheet at no extra cost.

reVive item no. 2312 (medium) | 2313 (forte)

Dimensions	80/90 cm	100 cm	120 cm	140 cm	160 cm	180 cm	200 cm

reActive

Active support for a sense of freedom when lying down.

The “reActive” back support mattress is based on a frame made of innovative “reFoam” material. This surrounds the 7-zone pocket spring core on all sides. Together with the padding made of Swiss comfort foam, the ergonomic spring base provides the body with spot-elastic, active support on the mattress surface, where it needs it.

As a result, the “reActive” model provides a supportive yet free feeling when lying down – throughout its entire life cycle, until its core is recycled.

Spot-elastic support

With optimum interplay of pocket springs and comfort foam.

reFoam

This sustainable foam composition is manufactured in a newly developed process, in close cooperation with Swiss material specialists.

Mattress cover

reFoam

A novel, practical material.

riposa reFoam is an important component of every Circle Sleep back support mattress. This sustainable foam composition is manufactured in a newly developed process, in close cooperation with Swiss material specialists. reFoam is based on carefully selected quality foam elements that would be discarded in the conventional manufacturing process. Combined with specially developed engineering, these elements can be used to create a new raw material, which now features for the first time in the Circle Sleep product line.

Circle Sleep® is feeding
mattresses into a sustainable
cycle **with a future.**
